## Research Interests

Large Language Models for Mathematical Reasoning · Automated Verification of Mathematical Problems and Solutions · Multimodal Analysis

## Education

### Hanyang University

Mar 2021 – Feb 2026

B.S. in Mathematics | Minor in Entrepreneurship

## Professional Experience

### Daesung Academic Development Institute

Mar 2026 – Present

Mathematics Content Developer

- Develop and review CSAT-style mathematics problems and solution explanations for mock examinations and educational materials.
- Check problems and solutions for mathematical accuracy, logical consistency, and alignment with the Korean high-school mathematics curriculum.

### Stech (Start Up)

Mar 2025 – Feb 2026

Co-Founder | Front-end Developer

- Developed the front-end of a platform that extracts and visualizes sports data using object detection.
- Contributed to product planning, interface design, and early-stage service development.

## Selected Projects

### LLM-Assisted Mathematics Problem Review Pipeline

Jul 2026

Personal Project | GitHub Repository

- Designed and prototyped an LLM-assisted pipeline for the quality assurance of CSAT-style mathematics problems and solution explanations.
- Developed a preprocessing workflow to extract and structure problem statements, equations, and solution text from HWPX files.
- Defined review criteria for mathematical validity, consistency between problems and solutions, and curriculum compliance.

### LLM-Assisted Mathematics Problem Similarity Review Tool

May 2026

Personal Project | GitHub Repository

- Developed a web application for reviewing similarities between privately developed mathematics problems and past CSAT and national mock-exam problems.
- Designed a filtering workflow in which users select relevant units and key topics to narrow the set of candidate problems.
- Used a large language model to generate structured problem cards describing each problem's concepts, solution structure, and key reasoning steps for comparison.
